CaregiverConnect

CaregiverConnect incorporates the patient's caregiver(s), and other loved ones, into the telehealth program, providing a **holistic approach to managed care**. The free mobile application provides the caregiver valuable insight into the patient's care plan.

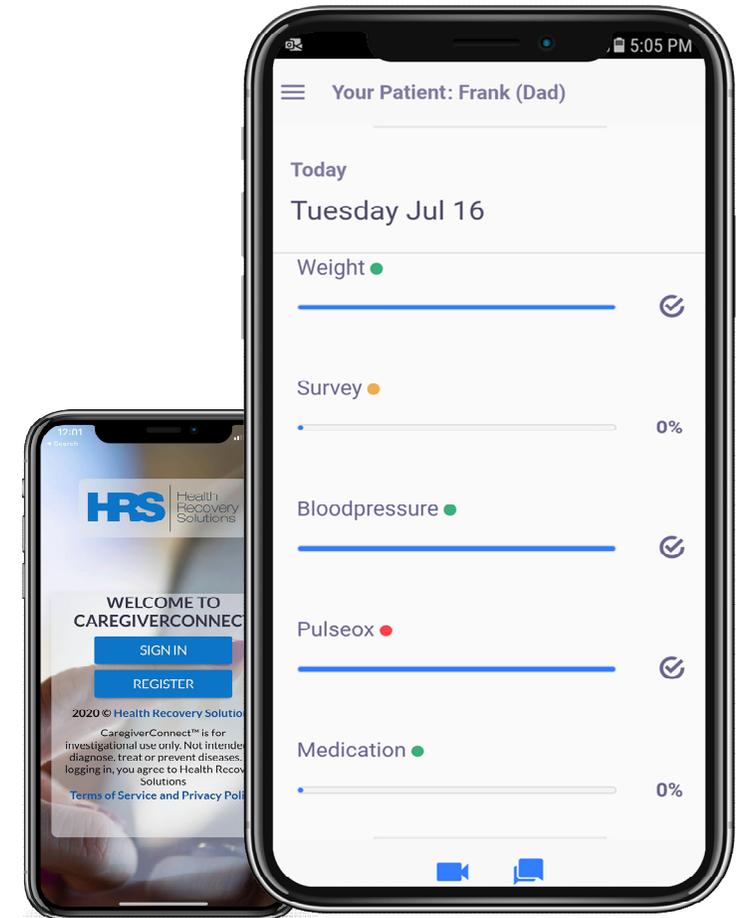

A **central hub** of the patient's care for the caregiver where they can communicate through text, call, and video

All recorded metrics are accessible to the caregiver even **when they are away** from the patient to see if the patient has completed necessary actions

Features include:

- ✓ Available on both iOS and Android
- ✓ Access to see patient adherence for each metric
- ✓ Incoming and outgoing communications, consisting of video, voice, and text messaging
- ✓ Daily patient risk assessment

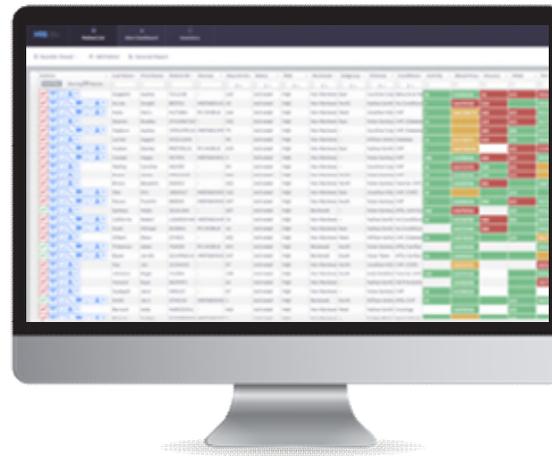

Customized EMR Integrations

Enrollment Made Easy and Workflow Optimized

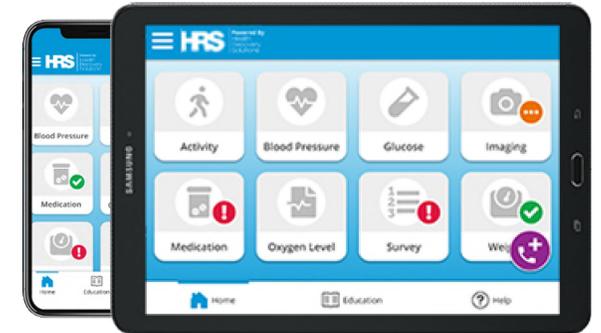

Your EMR

Through a seamless HL7 or FHIR interface, your patients will automatically enroll in the telehealth program

HRS ClinicianConnect Platform

As the patient information flows into HRS' platform, you will have all the critical information necessary to engage the patient in real-time

Patient's Device

The patient will engage with your clinical team and follow their customized care plan via the HRS platform
